# ERIC RAYNAUD

## MEMBER OF THE GROUP EXECUTIVE COMMITTEE AND CEO, ASIA PACIFIC, BNP PARIBAS

At BNP Paribas’ third Sustainable Future Forum in Singapore, I was delighted to see how we and our clients have continued to progress more concretely in putting the Sustainable Development Goals (SDGs) into action.

Sustainability is central to BNP Paribas’ development strategy, because we are committed to building a sustainable future, to understanding what it means for our businesses and, most importantly, how we can contribute to it.

Our commitment is much more than a slick marketing slogan. Today, when we analyse a project, we are paying increasing attention to sustainability criteria. We look at the environmental impact but also the impacts on public health and social inclusion, and the benefits for individuals and local communities, and we take a view that is not always straight forward or immediately obvious when we make decisions around funding.

As you will see in this report, at our Forum this year, we brought together an impressive array of leaders, including many of our clients to discuss, debate and inspire us in creating a sustainable future, through alignment of our business purpose.

At BNP Paribas we want to be part of meaningful coalitions, like we have formed with UN Environment with respect to the US\$10 billion Sustainable Finance Facilities globally. A highlight at this year’s event was a spotlight on one such project where we are working in partnership with the government of Andhra Pradesh in India on The Zero Budget Natural Farming (ZBNF) project. We were honoured to be joined by the Chief Minister His Excellency Mr Chandrababu Naidu at the Forum who gave a deep dive on the development, which will work with six million farmers from across India’s biggest agricultural state to improve their productivity while also improving sustainability. Requiring a US\$2.3 billion investment, BNP Paribas will structure the finance. This has the potential to improve the future of food supply in the world’s second most populous nation.

Looking ahead, there are a number of areas where BNP Paribas can work harder:

- We need **SCALE**, meaning we need to join forces with all the stakeholders, to leverage our balance sheet of €2 trillion plus in tandem with others.
- We need to support clients that are going in the right direction, and work less with clients that are not preparing for the future.
- We can play a role channelling capital from private investors to game-changing sustainable projects.
- We need to make sure that our 200,000 staff at BNP Paribas all have a positive impact, including through their personal endeavours and contributions to communities.
- And last, but not least, we need the many brilliant ideas of our clients, informed through meetings with entrepreneurs, investors, start-ups and innovators. We have to listen to them and we need to be more disciplined

and organised to build solutions together. Events such as the Sustainable Future Forum are a great initiative to helping achieve this.

# ACHIEVING THE IMPOSSIBLE

**Bronwyn King** | Founder & CEO, Tobacco Free Portfolios

JOIN BNP PARIBAS IN TAKING THE TOBACCO FREE PLEDGE

[Click here to join the pledge](#)

[Click here to learn more](#)

**Bertrand Piccard** | Initiator, Chairman and Pilot, Solar Impulse

HOW PROFIT WILL DRIVE DECARBONISATION BY 2030

[Click here to learn more](#)

Setting the overall tone for the conference that 'nothing is impossible', Bronwyn King, Founder & CEO, Tobacco Free Portfolios and Bertrand Piccard, Initiator, Chairman and Pilot, Solar Impulse, gave their vision of the future in two compelling keynotes.

Bronwyn's rousing speech highlighted the fact that financial portfolios that are invested in tobacco producers are, in effect, supporting the killing of 19,000 people a day. While the World Health Organisation (WHO) and governments, as well as parents, teachers and communities are working hard to limit the use of tobacco and educate the next generation about the harmfulness of the substance, the global finance sector "continues with business as usual," Bronwyn said. The address concluded by saying tobacco will continue killing people at a rapid speed unless all constituents, including the finance sector, are on the [same page](#).

***"There is only one option, which is tobacco free and the finance sector sits at the heart of this solution."***

*~ Bronwyn King*

Through his ethos and optimism, Bertrand Piccard, a psychiatrist and balloonist, who was the co-pilot of 'Solar Impulse', the first round-the-world solar powered flight, challenged every doubt that blocks innovation and change. He argues: "there are roads everywhere; there are possibilities, potentials and options everywhere if we only allow ourselves to change our mindset." To make a better world, we need to change the paradigm that makes us believe that we are dependent on fossil fuel energy or that fossil fuel energy is cheaper than renewable energy because it is not true. [Renewables](#) are three times cheaper than fossil fuel energy.

***"We have today, products, technologies and ways to create jobs, make money and provide sustainable growth that use renewable energies so we can transition from high carbon sources. We need businesses to embrace these new solutions."***

*~ Bertrand Piccard*

Today, we must throw away the notion that we can do business as usual and still survive on this planet. Change is not easy and not without many hurdles, but with conviction, courage and new ways of thinking, we can achieve what may have seemed impossible.

# BUILDING A PROSPEROUS AND INCLUSIVE FUTURE

## FEATURING HE CHANDRABABU NAIDU, CHIEF MINISTER, STATE OF ANDHRA PRADESH, INDIA

### MODERATOR

**Joris Dierckx** | Head of South East Asia and CEO Singapore, BNP Paribas

### PANELISTS

**HE Chandrababu Naidu** | Chief Minister, State of Andhra Pradesh, India

**Satya Tripathi** | Assistant Secretary-General, United Nations Environment

**Pavan Sukhdev** | Founder and CEO, GIST Advisory and United Nations Environment Goodwill Ambassador

Achieving scalable transformations that bring benefits for both the environment and society was a key focus of this panel's discussion. Chief Minister of India's Andhra Pradesh State, His Excellency Mr Chandrababu Naidu, started by presenting his vision and experience in building the new state capital Amaravati. Having provided political leadership for India's IT revolution, Naidu spoke with enthusiasm about creating a city that will foster the nation's most valuable asset, its human capital. India's policymakers, city planners as well as financiers and engineers from around the world are helping to design and develop a city that provides state-of-the-art connectivity and infrastructure based on the 17 SDGs. A vital goal of this project is to create the world's 'happiest city'.

***"Our vision is to be the number one state in India by 2029 on the Citizen Happiness Index."***

*~ HE Chandrababu Naidu*

- The agriculture sector alone creates more jobs than the automobile, steel and IT industries put together. But food production systems also account for around 50 per cent of greenhouse gas emissions. Sustainable farming, based on non-chemical methods as adopted by Andhra Pradesh, is an essential solution for climate change.

- Shifting six million farmers to zero-budget natural farming, requiring US\$2.3bn in private sector capital and moving away from government subsidies, will create jobs, food and also save the country a considerable amount of money.
- Smart connectivity is a lifeline for a city. It improves people-to-people contact, eases the movement of goods and services and enables the city to grow.

- Cities sometimes focus too much on constructing the hardware such as buildings, infrastructure and transport networks and too little thought is given to the software including skills advancement, the creation of knowledge, technology development and improvements in lifestyles. Focusing on building human capital allows a state to become internationally competitive.
- While the private sector may be able to provide finance and expertise, leadership from governments is critical to help bring about scalable transformations.

# LEADERS OF THE FUTURE

## SUSTAINABILITY MINDSET DRIVING REPUTATION AND TRUST

Given the collapse of trust in institutions and businesses, how do companies overcome reputational risks and regain leadership positions? Managing change, reputation and maintaining trust has never been more imperative. While reputational damage impacts shareholder value, activist shareholders are on the other hand placing demands on companies that are often at odds with creating shareholder value.

Amid immense pressure from rapidly changing expectations from society, companies' sense of purpose must be consistent with community norms, and corporations must balance the interest of the society, with those of the customer, the worker and the shareholder, while conducting their business. This was the conclusion of the leadership panel moderated by Jennifer Westacott, Chief Executive, Business Council, Australia.

*"One thing we have to do together is to build the world of tomorrow, and we have to make sure that finance helps to create solutions for the world of tomorrow."*

~ Antoine Sire

*"The most important leadership quality for inspiring trust is authenticity. Authenticity allows you to convey a purpose that is meaningful and compelling."*

~ Jennifer Westacott

*"Trust is not just about compliance with regulations. It is about looking at the proper values between the interests of the worker, interests of customers and the interests of the shareholder."*

~ Ajay Dua

BNP PARIBAS  
SUSTAINABLE FUTURE  
"Finance for a better tomorrow"

Mandated with the task of monitoring and providing strategic guidance to management, company directors face much greater demands and scrutiny from investors, particularly when it comes to meeting sustainability goals. Board structures need to fundamentally change before they can efficiently and effectively balance both sustainability and profitability concerns. Addressing issues in boardroom governance is therefore key, as discussed in a panel moderated by Angelina Kwan, Vice Chair, member of the Board of Governors, The Women's Foundation.

*"The next generation will be our champions of sustainable development because they face completely different circumstances and have been educated differently." – Anton Wong*

### NEXT GENERERS: EXPECTATIONS FOR TOMORROW'S WEALTH OWNERS

#### MODERATOR

##### Anton Wong

#### PANELISTS

##### Leonie Kelly

Project Director, Sustainable Finance Initiative, RS Group

##### Curtis Chin

Asia Fellow, Milken Institute Asia

##### Julia Tan

Corporate Development & HRD Director, Liputan Group

Another key theme that emerged from discussions led by Anton Wong, Managing Director, Head of Key Client Group, Asia Pacific, BNP Paribas Wealth Management, is our next generation of leaders that are changing the professional landscape. Impact investing and ESG and SDG projects are aimed at making the world a better place. These transformational initiatives, which will impact future generations, require a change in mindset, and a rediscovery of the meaning of 'wealth'. The opportunities and challenges faced by private investors, including the dilemma over philanthropy and impact investing and the real meaning of return on investment, were debated in this session.

# ACCELERATING ASIA'S ENERGY AND INFRASTRUCTURE TRANSITION

There is undoubtedly increased momentum and a heightened desire to move towards a low carbon world, however, more needs to be done to accelerate the process. At the centre of the debate is how finance might help to fast-track this process.

## MOVING TO ACTION: HOW CAN PRIVATE FINANCE ACCELERATE ASIA'S ENERGY AND INFRASTRUCTURE TRANSITION TO A LOW CARBON WORLD?

### MODERATOR

**Philippe Joubert**

Senior Advisor, International Development, World Energy Council, and Founder and CEO, Earth on Board

### PANELISTS

**Thierry de Longuemar**

Vice President and CFO, Asian Infrastructure Investment Bank (AIIB)

**Keryn James**

CEO, Environmental Resources Management (ERM)

**Geert Peeters**

Executive Director and CFO, CLP Holdings

**Sebastien Soleille**

Global Head of Energy Transition and Environment, BNP Paribas

*“Finance has a key role to play. We have seen that in the last two years, evidenced by the TCFD (Task Force on Climate-related Disclosures) and other aspects. It really drives change. It really has an influence. Money talks,”* said Keryn James, CEO, Environmental Resources Management, as part of the discussion.

However, the financial viability and bankability of renewable energy projects remain one of the main reasons for the current slow progress in this shift. Pressure is also growing on more investors to accelerate the implementation of the TCFD recommendations, with expectations for existing rules around corporate disclosure to include material climate risks. Extensive use of scenario analysis in disclosure of climate-related risks and opportunities, and the creation of climate risk-based asset allocation frameworks is a likely response, as is investment governance and carbon risk pricing across the entire portfolio. Helena Viñes Fiestas and her panel of industry experts discussed practical steps to overcome obstacles that exist when expanding climate investment and conduct risk analysis beyond traditional asset classes. Evidence is emerging that ‘carbon-efficient’ firms are out-performing their peers, possibly indicating better governed firms support investment outperformance.

## FINANCE AND INVESTMENT SOLUTIONS TO BUILD CLIMATE RESILIENCE IN PORTFOLIOS

# THE FUTURE WE WANT: A HEALTHIER PLANET

**INSIGHTS FROM WBCSD  
CEO COUNCIL MEETING:  
PETER BAKKER, PRESIDENT &  
CEO, WBCSD**

***“The only way to win this game  
is to turn it into a conversation  
about the cost of capital.”***

*~ Peter Bakker*

***“Investment in the SDGs can yield even higher  
returns, making it not only a nice thing to do but also  
a smart thing to do.” ~ Bertrand Badré***

To move the SDGs into action, companies have to shift from being competitive to collaborative because achieving the 17 SDGs requires integrated solutions. Increasing private sector investment is also crucial, with the panel on ‘Investing for the Sustainable Development Goals’ examining the issues preventing this from happening. While state-run and non-governmental organisations have earmarked funds to support and drive the SDGs, the private wealth sector and society as a whole need to get involved to help fill the funding gap. There are now loans with interest rates that are determined by a project’s future performance against ESG targets, like the Danone positive incentive loan issued by BNP Paribas.

## INVESTING FOR THE SUSTAINABLE DEVELOPMENT GOALS

# THE FUTURE WE WANT: A HEALTHIER PLANET

## ANTICIPATING EVOLUTION OF SOCIAL FINANCE IN CAPITAL MARKETS

### MODERATOR

**Stephanie Sfakianos**  
Head of Sustainable Capital Markets, BNP Paribas

### PANELISTS

**Gail Whiteman**  
Rubin Chair, Director of the Pentland Centre for Sustainability in Business at Lancaster University, UK, and the Professor-in-Residence at WBCSD

**Irene Sánchez Aizpurúa**  
Head of Investor Relations & Marketing, European Investment Bank

**Ian Woods**  
Head of ESG Investment Research, AMP Capital Investors

**William Sabandar**  
President Director, MRT Jakarta

Equally as important is the evolution of social finance in capital markets. Companies are shifting how they think about the social impact of their business and the direct effect it has on people and society through their operations as they transition towards a low-carbon world. Social impact is no longer a 'nice to have' but a business imperative, an integral part of corporate strategy as a key driver of value.

In redefining and creating value in waste, filmmaker Craig Leeson, whose debut feature A Plastic Ocean helped kickstart the anti-plastic revolution, led an enthusiastic discussion about how companies should be thinking differently about waste and recycling. In light of the 'wave of change' resulting from increased awareness and deep public concern about the extent of marine debris, and particularly plastic waste, the panel explored the impact this is having on corporates as the world shifts toward a circular economy.

***"In a circular economy, banks have to re-assess how we look at risk and how we price it."***  
~ Sabine Oudart

***"Customer concerns have helped to accelerate the pace of change, pushing businesses to tackle the issue and change their behaviours. In a circular approach you have to collaborate."*** ~ Laurent Auguste

## FROM TRASH TO TREASURE: REDEFINING AND CREATING VALUE IN WASTE

**Dave Andrew**  
Vice President, Sustainability, Chemicals and Downstream, ExxonMobil Chemical Company

## DIVERSITY AND LEADERSHIP: IN CONVERSATION WITH TENNIS LEGEND LINDSAY DAVENPORT

*"The WTA will be doing everything they can now to help players who decide to become a mum to come back to competition."*

For many women, the transition back to work can be a challenging task. Tennis legend Lindsay Davenport, now a mother of four, discussed her experience on returning to competitive tennis after having her first child. "It was treated almost like an injury," she said. While making those transitions was tough in the past, the Women's Tennis Association (WTA) has worked hard to change the rules and help players who want to return to the game after starting a family.

Women's tennis has come a long way since the days of Billie Jean King, who is also the founder of the WTA. King laid the groundwork to raise the profile of women's tennis, and the association has played a critical role in championing equal rights and pay.

***"I was very spoiled, very lucky, to come into a sport with Billie Jean (King), Chrissy (Evert) and Martina (Navratilova). They really paved the way to make tennis the leading women's sport around the world. The other sports are still trying to catch up."***

Successful athletes, many of whom are also leaders, are adept in managing ambitious goals and tight schedules. Having role models, such as Williams sisters Venus and Serena, who are not afraid to speak up, has been important to the sport.

Equally important is having a great team and family support. When Davenport was training to be a competitive tennis player during her youth, not every family at the time believed that 'females could be athletes at all'.

# SUSTAINABLE FUTURE FORUM 2018: WHERE TO NEXT?

There is an evident shift in attitudes and approaches towards sustainability with companies increasingly adopting the SDGs as a business strategy and not as CSR. From the first BNP Paribas’ Sustainable Future Forum in 2016 to this year’s event, the conversations and debate regarding sustainability have shifted from the “why” to the “how.” Technology will be a driver of change going forward, however, for projects to be successful, partnerships must be built around values and not self-interest.

***“Sustainability has made it to the very top of not only the economic agenda but also the political agenda. We’ve seen that very concretely in Europe with the roadmap for sustainable finance but also in Australia, New Zealand, Japan, China and all around.”***

~ Helena Viñes Fiestas

The four Ps that are required to facilitate the shift to a sustainable future are identifying the possibilities, understanding the politics, defining the policy paradigms and building partnerships. Transparency is also important to establish trust, and without trust and transparency, collaboration will not be possible.

***“We are in our own comfort zones and think that everything will work out because I have good intentions. As famously said, the road to hell is paved with good intentions.”*** ~ Satya Tripathi

Seventy per cent of WBCSD members, comprising the 250 leading corporations in the world, have included sustainability as a part of their corporate strategy, not as a CSR initiative. In some sectors, the proportion has risen to 90 per cent. Asia, in particular China, has made significant progress in adapting and adopting sustainability in core business strategies, and the region is narrowing the gap with Europe and other parts of the world in terms of sustainability initiatives.

So, where to next and how do we get closer to creating more sustainable ecosystems?

***“The only way you can get trust is by providing transparency and transparency requires opening our books, opening the way we work.”*** ~ Pierre Rousseau
